AIRFEED HELIX LOCK LINERS

Application Data:

Helix lock liners are a new design of airfeed lock liners. These lock liners are similar to the original style but their locking tabs incorporate a 6° helix angle which locks positively with the adapter tip. The purpose of the helix angle is to reduce vibration, torque, and thrust to ensure top quality in the finished tool while maintaining comfort for the user. Helix lock liners are made from only selected steels known for their long wear and stability, which guarantees a strong, quality product.

Ordering Information:

When ordering please specify:

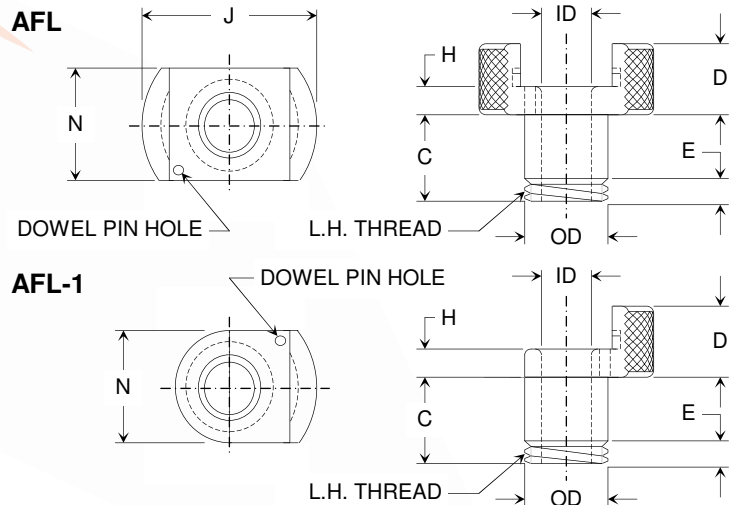

Type	Series	OD in 64ths	Length in 16ths	ID
AFL	22	52	10	9/16

Technical Information:

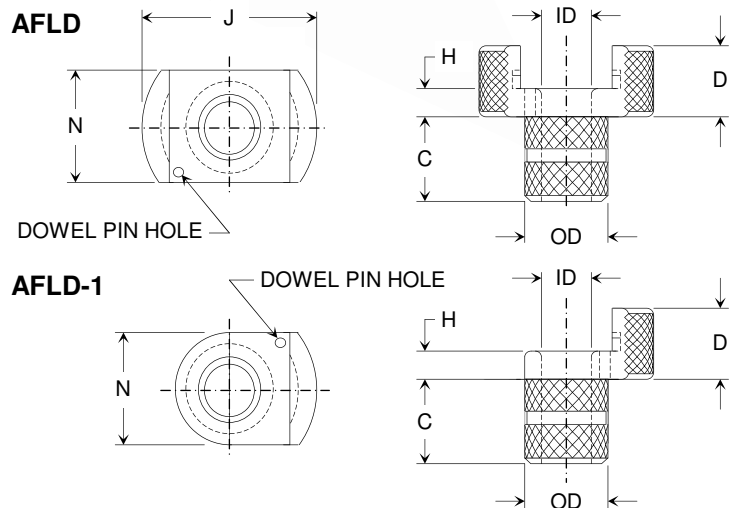

ID Tolerances:

3/8 - 5/8"	+0.0002 / +0.0006
